What do I want to learn or understand better?

My main goals as of writing this is to understand more of the "business planning" when it comes to a project. I already have some knowledge regarding coding and design, but would also like to learn more about it since I can learn a lot more. Since we will be using Scrum as our agile framework I want to learn more about it; all its parts and roles.

How can I help someone else, or the entire team, to learn something new?

The current knowledge I have regarding everything that comprises this project I am more than willing to share. If anyone asks me a questions I will answer as well as I can. We have also decided to work in groups (at least 2 and 2). This will make it easier to help each other and share experiences.

What is my contribution towards the team's use of Scrum

From the lego exercise we had this week, my role was scrum master. This meant that I worked with the scrum masters of the other groups to craft a plan of how the work should be divided and which group had which responsibilities. I then informed my group on how we will proceed. The exercise was beneficial for me since it gave me insight in how (more or less) scrum works without too much details.

What is my contribution towards the team's deliveries?

From the exercises with lego I was assigned the tasks of scrum master and also building/gathering. I will also be the scrum master in the upcoming project, which means that I will supervise our scrum framework. I will have to learn more about scrum and what it means to be scrum master for me to do this role properly.
